

V-Max (Vibemax)

The 6-Doc Agentic Swarm Framework for Vibe Coding & AI Integrated Software Engineering.

Official GitHub: <https://github.com/vickee2025/v-max> Author: Vickee (Tecvic)

The 10-Minute Vibe Coding Breakdown

Why AI coding sessions start like magic, but quickly degrade into broken spaghetti code.

When starting a project with AI tools (Google Antigravity, Claude Code, Cursor), models excel in the initial turns. But after 10-15 prompts, the context window saturates. The AI suffers from **Context Drift & Amnesia**—it forgets previous table columns, invents new button styles, breaks existing routes, and creates duplicate logic.

Vibe Coding Without V-Max

- Schema Corruption:** AI invents random DB columns & breaks migrations.
- UI Drift:** Mismatched fonts, paddings, and arbitrary hex colors on each prompt.
- Dead Routes:** Broken page links, orphaned views, and 404 redirects.
- Resumption Friction:** Takes 30 mins to explain the project when returning after a break.

V-Max Living Docs Solution

- Immutable Schema:** Adheres strictly to visual Mermaid ER diagrams in docs/backend-schema.md .
- Pixel-Perfect Design:** Inherits unified design tokens from docs/ui-ux-spec.md .
- Explicit Navigation:** Visual flowchart mapping in docs/app-flow.md .
- Instant 30s Bootstrap:** Reads docs/ and immediately knows 100% of current state.

The 6 Essential Living Documents

The single source of architectural truth maintained in your project's docs/ folder.

DOCUMENT 01

Product Requirement (PRD)

`docs/prd.md`

The **What** and **Why**. Defines user personas, core problem statement, value proposition, and prioritized feature matrix (Shipped vs. In-Progress vs. Backlog).

DOCUMENT 02

Technical Requirement (TRD)

`docs/trd.md`

The **How**. Tech stack versions, build scripts, environmental variables, third-party APIs (Stripe, OpenAI, Supabase), and security/type constraints.

DOCUMENT 03

App Flow & Navigation

`docs/app-flow.md`

The **User Journey**. Complete visual Mermaid screen navigation flowcharts, route table, modal states, and step-by-step onboarding sequences.

DOCUMENT 04

UI/UX Design Spec

`docs/ui-ux-spec.md`

The **Look & Feel**. Design tokens (Hex/HSL), typography scale, spacing system, Dark/Light modes, and reusable component classes (buttons, cards, inputs).

DOCUMENT 05

Backend Schema

`docs/backend-schema.md`

The **Data Architecture**. Visual Mermaid Entity-Relationship (ER) diagrams, database tables/models, foreign keys, indexes, and API request/response contracts.

DOCUMENT 06

Implementation Plan

`docs/implementation-plan.md`

The **Living Roadmap**. Phased milestones with task checkboxes [x], active sprint backlog, immediate next build step, and changelog.

The 5-Specialist Parallel Swarm

V-Max launches 5 specialized subagents working simultaneously to reverse-engineer any project in seconds.

Swarm Execution Topology

Parallel dispatch across 5 inspection vectors

Product Analyst

docs/prd.md

Tech Analyst

docs/trd.md

Flow Mapper

docs/app-flow.md

UI/UX Specialist

docs/ui-ux-spec.md

Backend Engineer

docs/backend-schema.md

> System ready. Click 'Run Swarm Simulation' to view parallel agent execution...

The Vibe Vision Handshake

Codebases show what was built in the past. Only YOU know what you want to build next.

The 4-Step Handshake Protocol:

1. **State of the Union:** Agent reports total project completion % and working modules.
2. **Gap & Stub Detection:** Agent highlights half-developed features, missing endpoints, or TODO markers.
3. **3 Recommended Next Steps:** Agent offers concrete options to finish stubs or launch new features.
4. **The Alignment Question:** Asks what you want to build next, locks your decision into the **Active Sprint** in docs/implementation-plan.md, and begins execution!

Multi-IDE Setup & Activation Prompts

Use V-Max seamlessly across Antigravity, Claude Code, Cursor, Codex, and Gemini CLI.

Google Antigravity & Gemini CLI (Global 1-Click /vibemax):

```
/vibemax
```

Anthropic Claude Code:

```
Please read vibemax/SKILL.md and execute the Vibemax workflow: scan this project, create the 6 living docs in docs/, conduct the vision handshake, and update CLAUDE.md.
```

Cursor IDE (Composer: Cmd+I / Ctrl+I):

```
@vibemax/SKILL.md Vibemax this project. Scan the codebase, create docs/ with all 6 essential documents, conduct the vision handshake, and update .cursorrules.
```

Daily Continuous Sync Prompt (Any Tool):

```
Vibemax sync: audit recent git diff and update docs/ and implementation-plan.md.
```
